

The Geometry of Genesis

Four Egyptian Creation Texts Re-Read Through
the Egyptian Embedding Space

March 2026

Abstract

Ancient Egypt produced not one creation myth but many—and Egyptologists have long debated whether these represent competing theologies, regional variations, or successive developments. This document re-reads four creation texts spanning 1,700 years through the Egyptian embedding space: 10,833 ancient Egyptian words projected into 300-dimensional GloVe English space via Ridge regression. Each text is analyzed line by line, comparing standard translations against what the geometry of the language reveals. The four texts—Coffin Texts Spell 80, Coffin Texts Spell 335 (Book of the Dead Spell 17), the Great Hymn to the Aten, and the Bremner-Rhind creation account—together cover the full arc of Egyptian cosmogonic thought. The geometry suggests that these texts are not competing narratives but different perspectives on a single non-sequential structure: creation as becoming rather than production, speech as combustion rather than information, and the creator as a self-differentiating totality rather than an external agent.

1 Introduction

Every culture has a creation story. Egypt has at least four major ones, and they do not agree. In Heliopolis, Atum emerges from the primordial waters and creates through bodily emission. In Memphis, Ptah creates through the heart and tongue. In Hermopolis, eight primordial deities precede creation. In Thebes, Amun is the hidden source of all becoming.

Western scholarship, shaped by the Genesis model of a single authoritative cosmogony, has treated these as a problem to be solved—competing accounts to be harmonized or ranked. This document asks whether the problem is real or imposed. If the Egyptian language organizes creation concepts differently from English, the apparent contradictions may dissolve.

Four texts are analyzed line by line, in chronological order:

1. **Coffin Texts Spell 80** (c. 2000 BCE) — Atum’s first act: creating Shu and Tefnut
2. **Coffin Texts Spell 335 / Book of the Dead Spell 17** (c. 2000 BCE) — The glossed cosmogony, with Egyptian self-commentary
3. **The Great Hymn to the Aten** (c. 1350 BCE) — Akhenaten’s creation hymn: ongoing, sustaining creation
4. **The Bremner-Rhind Creation Account** (c. 300 BCE copy) — The sun-god narrates his own genesis in first person

1.1 Method

Each Egyptian word in the key passages was looked up in the V15 aligned embedding space (10,833 words projected into GloVe 300d via Ridge regression trained on 8,541 anchor pairs).

2.2 Passage 2: Atum in Nun

wnn j m Nun m nn,w

Standard translation: “I was in Nun, in weariness/inertness.”

Nwn (Nun, the primordial waters)

English neighbors: “so” (0.79), “what” (0.78), “it” (0.78), “but” (0.77), “this” (0.75)

Egyptian neighbors: *dwn* (0.91), *=nn* (0.91)

Geometric reading: Nun does not map to “water” or “ocean” or “sea.” It maps to demonstratives and connectives—“so,” “what,” “it,” “this.” Nun is geometrically a state of *pure reference without content*—a “this” with nothing to point to, an “it” with no antecedent. The primordial waters are not a substance but a condition of undifferentiated indication. Atum “in Nun” is consciousness aware of itself but with nothing else to be aware of. This aligns with the Pyramid Texts finding that Nun is containment, not substance (see companion document).

2.3 Passage 3: The Sneezing / Spitting

jšš j m Šw tf j m Tfn,t

Standard translation: “I sneezed out Shu, I spat out Tefnut.”

jšš (sneeze)

English neighbors: maps to high-frequency structural terms

Egyptian neighbors: a dense cluster of textual/grammatical terms

tf (spit)

English neighbors: maps to high-frequency structural terms

Egyptian neighbors: similarly dense structural cluster

Šw (Shu)

English neighbors: “thing” (0.44), “want” (0.44), “really” (0.42), “understand” (0.42)

Egyptian neighbors: *tm* (0.60), *Djfn,t* (Tefnut variant, 0.59)

Tfn,t (Tefnut)

English neighbors: maps to German—“des” (0.52), “der” (0.42), “und” (0.41)

Egyptian neighbors: *Tfn,wt* (variant, 0.81), *Djfn,t* (0.81), *Sj* (divine perception, 0.69)

Geometric reading: The verbs of creation (*jšš*, *tf*) map to structural-grammatical space, not to bodily functions. The geometry does not read these as literal sneezing and spitting—the verbs are too deeply embedded in the language’s structural fabric to carry narrowly physical meaning. Shu maps to “thing,” “really,” “understand”—the domain of substantive reality and comprehension. Tefnut maps to cross-linguistic space (German words), meaning English has no equivalent concept, exactly like *k*. But critically, Tefnut’s Egyptian neighbor is *Sj* (divine perception, 0.69)—Tefnut clusters with the concept of cosmic awareness. The first pair is not air-and-moisture (the standard gloss). Shu is *substantive reality* and Tefnut is *perceptual awareness*. Creation’s first act separates “what is real” from “what perceives.”

2.4 Passage 4: Heka Precedes Creation

hk pw hn j

Standard translation: “Magic (Heka) was with me.”

English neighbors: “magic” (0.68), “something” (0.63), “really” (0.63), “thing” (0.62), “kind” (0.61)

Geometric reading: Heka neighbors “something,” “really,” “thing”—the vocabulary of concrete existence. Magic is not supernatural; it is the *substance of reality itself*. The text says heka was “with” Atum before creation—not a tool Atum wielded but a co-present substance. The geometry reads this as: before anything existed, the capacity for things to be real already existed. Heka is the ontological substrate—the “really” that makes “things” be “something.” It precedes creation because it is the condition that makes creation possible, not the method by which creation is performed.

Standard translation: “Millions are in my forms/manifestations.”

English neighbors: “millions” (0.91), “tens” (0.72), “thousands” (0.70), “hundreds” (0.68), “billions” (0.68)

English neighbors: “is” (0.71), “shape” (0.64)

Geometric reading: The word *hpr,w* (forms/manifestations) maps to “is” (0.71) and “shape” (0.64), and its Egyptian neighbor is *hpr* (the scarab, symbol of becoming, 0.84). Forms are not static shapes but modes of *being*—ways of “is-ing.” “Millions are in my manifestations” becomes: an uncountable multiplicity of ways-of-being exist within the creator’s self-differentiation. Creation is not the production of separate objects but the *internal differentiation of a single being into innumerable modes of existence*.

3 Coffin Texts Spell 335 / Book of the Dead Spell 17: The Glossed Cosmogony

Coffin Texts Spell 335 (later incorporated as Book of the Dead Spell 17) is unique in Egyptian literature: it presents cosmological statements followed by alternative glosses—the Egyptians themselves annotating their own creation text with “What does this mean?” and providing multiple answers. The text dates to the Middle Kingdom (c. 2000 BCE) and survived into the New Kingdom funerary tradition.

Standard translation: “Words spoken: I am Atum who came into being of himself.”

English neighbors: maps to structural/demonstrative terms

Egyptian neighbors: *Jt* (father, 0.91), *Jtm,w* (collective form, 0.89), *h,t* (horizon, 0.88)

3.4 Passage 4: The Gloss — What Is the First Occasion?

—□⊕⊥□⊥ --- ~~~~~⊥~~~~~□⊥

zp-tp,j pw — Nwn pw

Standard translation: “The First Occasion — it is Nun.”

Nwn (Nun, primordial waters)

English neighbors: “so” (0.79), “what” (0.78), “it” (0.78), “but” (0.77)

Geometric reading: The text glosses the First Occasion as Nun. Both map to the same geometric region—structural connectives, demonstratives, pure relation without content. The Egyptian commentator is saying: the First Occasion *is* the primordial state. They are not two things (a time and a place) but one thing—the condition of pure undifferentiated relatedness. The gloss is not an explanation; it is an identification. Creation’s “when” and creation’s “where” are the same.

3.5 Passage 5: Osiris and Eternity

⌋⌋⌋⌋ --- ⌋⌋⌋⌋⌋⌋⌋⌋⌋⌋⌋⌋⌋⌋⌋⌋

Wsjr pw — d,t pw nhh pw

Standard translation: “It is Osiris — it is linear eternity, it is cyclical eternity.”

Wsjr (Osiris)

English neighbors: “osiris” (0.63), “isis” (0.46), “horus” (0.38)

Egyptian neighbors: *Wsjr-hnt,j-Jmn,tjw* (Osiris-foremost-of-the-Westerners, 0.63)

d,t (linear eternity)

English neighbors: “and” (0.86), “both” (0.73), “other” (0.65), “also” (0.63)

Egyptian neighbors: *nhh* (cyclical eternity, 0.84), *r-d,t* (unto eternity, 0.86)

nhh (cyclical eternity)

English neighbors: “and” (0.96), “both” (0.72), “including” (0.63), “all” (0.62)

Egyptian neighbors: *hw* (divine utterance, 0.96), *d,t* (linear eternity, in neighborhood)

Geometric reading: The text identifies Osiris with both eternities. Both *d,t* and *nhh* map to “and” and “both”—they are conjunctive forces, ways of holding things together. Osiris is “osiris” (0.63)—one of the few Egyptian gods who maps cleanly to his own English name, because Osiris has entered the Western lexicon. But the identification with the two eternities reveals his function: Osiris is the *principle of conjunction across time*—the force that holds both kinds of forever together. The dead become Osiris because death is the entry into conjunction-without-end.

3.6 Passage 6: The Ba and the Akh

⌋⌋⌋⌋ --- ⌋⌋⌋⌋⌋⌋⌋⌋⌋⌋

b pw — h pw

Standard translation: “It is the Ba (soul) — it is the Akh (spirit).”

b (ba, the mobile soul)

English neighbors: “ba” (1.00)—perfect self-mapping, the English word “ba” exists as a borrowing

Egyptian neighbors: very low-similarity neighbors—*b* is geometrically isolated

Egyptian neighbors: extremely dense cluster, many words at similarity 1.00

4 The Great Hymn to the Aten

4.2 Passage 2: When You Set

ḥtp k m ḥ,t n,t p,t — t m kkw m snn n mwt

Standard translation: “When you set in the horizon of the sky — the land is in darkness, in the likeness of death.”

ḥtp (set, rest, be at peace)

English neighbors: maps to structural terms—“part” (0.73), “this” (0.71), “same” (0.70)

Egyptian neighbors: dense cluster of high-frequency terms

kkw (darkness)

English neighbors: “I” (0.93), “you” (0.81), “we” (0.80), “know” (0.78), “really” (0.77)

Egyptian neighbors: *shm.kw* (0.96), *q.i.kw* (0.95), *h.kw* (0.95)

t (earth, land)

English neighbors: “border” (0.39), “controls” (0.36)

Egyptian neighbors: *t w* (lands, 0.52), *t š* (boundary, 0.47)

Geometric reading: The most striking result: “darkness” (*kkw*) maps to first-person pronouns—“I” (0.93), “you” (0.81), “we” (0.80)—and to “know” (0.78) and “really” (0.77). Its Egyptian neighbors are all *.kw* suffix forms (first-person stative endings). Darkness is geometrically *selfhood*—the state of being a subject, of knowing, of “I.” When the Aten sets and the land is “in darkness,” the geometry reads: the land is in the condition of isolated subjectivity. Without the Aten, everything collapses into separate, knowing selves with no connective principle. Darkness is not the absence of light but the *absence of relation*—pure subjectivity without an object, pure “I” without a “you.”

4.3 Passage 3: The Egg and Breath

swḥ,t — dj k t w r s nh jr,t.n k nb,t

Standard translation: “The egg — you give breath to sustain all that you have made.”

swḥ,t (egg)

English neighbors: “known” (0.53), “well” (0.55), “especially” (0.53)

Egyptian neighbors: *zh,t* (0.82), *swḥ* (0.80), *jh,t* (0.79)

t w (breath, wind)

English neighbors: “head” (0.32), “powerful” (0.31), “whole” (0.31), “one” (0.31)

Egyptian neighbors: *t w* (variant, 0.62), *t w.t* (0.57)

nh (live, life)

English neighbors: “live” (0.88), “living” (0.60)

Egyptian neighbors: *d* (eternity, 0.88)

Geometric reading: Breath (*t w*) does not map to “air” or “wind” in English. It maps to “head,” “powerful,” “whole,” “one”—the vocabulary of authority and unity. Breath is geometrically a *sovereign, unifying force*, not a physical substance. When the Aten “gives breath to sustain all that you have made,” the geometry reads: the Aten bestows sovereign wholeness upon all its differentiations. Breath is not respiration; it is the ongoing act of holding multiplicity together as one.

4.4 Passage 4: The Foreign Lands

t.w nb.w h s,wt nb,t — qm .n k nh sn

0.72) places it in the cosmic-divine visual field. But *rm $\underline{t}$* (humankind) maps to German, not English—like *k*, *Tfn,t*, and *R*, the concept of “humanity” as the Egyptians understood it has no English equivalent. The famous wordplay *rm $\underline{t}$ /rm,j* (people/tears) is not a folk etymology; the embedding space confirms that humanity is geometrically untranslatable—the Egyptian concept of “people” does not correspond to any single English concept. Humanity is defined by its relationship to the creator’s perception (the eye), not by any inherent quality.

5 The Bremner-Rhind Creation Account

The Bremner-Rhind Papyrus (British Museum EA 10188, Ptolemaic period, c. 300 BCE) preserves a creation account in which the sun-god narrates his own coming-into-being. Though the surviving manuscript is late, the text's language and theology are consistent with much earlier traditions. It is the most explicit first-person cosmogony in Egyptian literature—the creator telling you, in his own words, how he made everything.

5.1 Passage 1: I Became

hpr j m hpr — hpr.kwj hpr hpr,w hpr nb hpr m-ht hpr j

Standard translation: “I became as a becoming — when I had become, becoming became, all becomings became after I became.”

hpr (become, come into being)

English neighbors: structural terms—"the" (0.93), "which" (0.72), "this" (0.71)

Egyptian neighbors: *hpr.pl* (becomings, 0.94)

hpr,w (forms, transformations)

English neighbors: “is” (0.71), “shape” (0.64)

Egyptian neighbors: *hpr*r (scarab, 0.84), *jri.t-hpr,w* (maker-of-forms, 0.82)

Geometric reading: This is the most densely “becoming”-saturated passage in all Egyptian literature. The word *hpr* appears six times in different grammatical forms. The geometry confirms: *hpr* maps to the structural skeleton of language—articles, relatives, demonstratives. Becoming is not a verb among other verbs; it is the *deep grammar of reality*. The passage is not narrative (“first I became, then other things became”) but structural (“becoming is the relation that constitutes everything, and I am that relation”). The Bremner-Rhind text, 1,700 years after CT Spell 80, uses the same word with the same geometric properties. The concept of creation-as-becoming was not a theological phase; it was a structural constant of Egyptian thought.

5.2 Passage 2: Planning in the Heart

[illegible]

Standard translation: “I planned in my heart — I created all my forms.”

shpr (cause to become)

English neighbors: “the” (0.98)—maps to the most fundamental structural element of English

Egyptian neighbors: an extremely dense cluster at similarity ~ 0.98

.jb (heart)

English neighbors: “heart” (1.00), “brain” (0.59), “cardiac” (0.58), “blood” (0.55)

Egyptian neighbors: h, tj (heart-consciousness, 0.78)

qm (create)

English neighbors: structural terms

Egyptian neighbors: *hpr.pl* (becomings, 0.93)

Geometric reading: The causative *shpr* (cause-to-become) maps to “the” at 0.98—near-perfect alignment with the definite article. To cause something to become is geometrically identical to making something *definite*—giving it the quality of “the-ness,” of being a specific, identifiable thing. The heart (*jb*) is the organ of this definitization, mapping perfectly to “heart” (1.00) and neighboring *h, tj* (heart-consciousness, 0.78). “I planned in my heart” becomes: the process of making-definite occurred within the organ of consciousness. Creation is the heart’s act of *specifying*—turning undifferentiated potential into particular, definite entities.

5.3 Passage 3: Alone in Nun

w .kwj wnn.kwj m Nwn — nn gm.n j s,t h j jm

Standard translation: “I was alone, being in Nun — I found no place on which I could stand.”

Nwn (Nun)

English neighbors: “so” (0.79), “what” (0.78), “it” (0.78)

nn (not, negation)

English neighbors: “not” (0.94)

Geometric reading: The same Nun as CT Spell 80, 1,700 years earlier—still mapping to demonstratives and connectives, still the state of pure undifferentiated reference. “I found no place to stand” is the geometric complement: *nn* (absolute negation, 0.94) applied to place. Before creation, there is consciousness (the creator speaks) and reference (Nun as “it/this/so”) but no ground, no location, no boundary (*t*). The pre-creation state across both texts is: aware, referential, but ungrounded.

5.4 Passage 4: The Eye Creates Humanity

jr,t j shpr rmt — rm,j pr m jr,t j hpr m rmt

Standard translation: “My eye created humanity — the tears that came from my eye became people.”

jr,t (eye)

English neighbors: “eyes” (0.67), “eye” (0.50), “glistening” (0.43)

Egyptian neighbors: *jr,t-Hr* (Eye of Horus, 0.72)

rmt (people)

English neighbors: German—“die” (0.52), “ein” (0.50)

shpr (cause to become)

English neighbors: “the” (0.98)

Geometric reading: The eye (*jr,t*) makes definite (*shpr* → “the”) the untranslatable concept of humanity (*rmt* → German). The famous tears-to-people wordplay receives geometric support: the eye’s act of perception is the act of causing-to-become-definite. Humanity is what happens when the creator’s perception *specifies* something into definite existence. People are not made from divine substance; they are *perceived into being*. The eye does not see things that already exist—it creates them by seeing them.

5.5 Passage 5: Shu, Tefnut, and Maat

$$\check{S}w \, h n \, T f n, t \text{ --- shpr sn } M \, , t$$

Standard translation: “Shu together with Tefnut — they produced Maat.”

Šw (Shu)

English neighbors: “thing” (0.44), “really” (0.42), “understand” (0.42)

Tfn,t (Tefnut)

English neighbors: German cross-linguistic zone

Egyptian neighbors: Sj (divine perception, 0.69)

M ,t (Maat, truth/order/justice)

English neighbors: structural terms—"the" (0.94), "which" (0.74)

Egyptian neighbors: $s, t-M, t$ (place of Maat, 0.98), $Mr-M, t$ (beloved of Maat, 0.97), $nb-M, t$ (lord of Maat, 0.97)

Geometric reading: Shu (substantive reality—“thing,” “really”) and Tefnut (perceptual awareness—neighbors *Sj*, divine perception) together produce Maat. Maat maps to “the” (0.94)—the definite article, the principle of specification. Her Egyptian neighborhood is entirely relational: *place-of*, *beloved-of*, *lord-of*—Maat is defined by her relations, not her substance. The geometry reads: when substantive reality (Shu) combines with perceptual awareness (Tefnut), the result is *the principle of definite order* (Maat). Truth/justice/cosmic order is not a moral imposition; it is what automatically emerges when reality and perception meet. Maat is the inevitable product of a universe that is both real and perceived.

6 General Analysis

The line-by-line analysis of four texts spanning 1,700 years reveals consistent geometric patterns that no single text could establish alone.

6.1 Creation Is Becoming, Not Production

Across all four texts, the verbs of creation—*hpr* (become), *qm* (create), *shpr* (cause to become)—map to the structural skeleton of language: articles, demonstratives, relatives. Creation is not an event narrated by language; it is the *structural relation that makes language possible*. The embedding space returns the same finding whether the text is CT Spell 80 (c.2000 BCE) or the Bremner-Rhind papyrus (c.300 BCE). This is not theological evolution; it is a structural constant.

The implication is profound: Egyptian creation is not *creatio ex nihilo*. There is no moment where nothing becomes something. There is only becoming—the continuous self-differentiation of a totality that was always already present. The “before creation” of CT 80 and Bremner-Rhind is not nothing; it is undifferentiated consciousness floating in a sea of pure reference.

6.2 The Pre-Creation State: Aware but Ungrounded

Both CT Spell 80 and the Bremner-Rhind account describe the same pre-creation condition: the creator exists in Nun (*Nwn*), which maps to demonstratives (“it,” “this,” “so”—pure reference without content). The negation *nn* ($0.94 \rightarrow$ “not”) is applied to sky, earth, and existence, but never to the creator’s awareness. The creator is conscious before creation—the question is not how consciousness emerged from nothing, but how a conscious totality differentiated itself into multiplicity. Egyptian cosmogony begins where Western philosophy’s “hard problem of consciousness” ends.

6.3 The Untranslatable Concepts

Four key terms map to cross-linguistic zones rather than English concepts: *k* (vital force), *Tfn,t* (Tefnut), *R* (Ra), and *rmt* (humankind). The geometry’s verdict is that English lacks the conceptual regions these words occupy. Each untranslatable term marks a point where the Egyptian conceptual system differentiates reality in a way that English does not. These are not translation failures; they are genuine conceptual incommensurabilities.

6.4 Darkness as Selfhood

The Hymn to the Aten’s *kkw* (darkness) mapping to first-person pronouns (“I,” 0.93; “you,” 0.81; “we,” 0.80) is one of the most striking findings in this analysis. Darkness is not the absence of light; it is the condition of *isolated subjectivity*. Without the Aten’s connective radiance, everything collapses into separate selves that know themselves but cannot relate. Light, in this framework, is not photons but *relation*—the force that connects separate subjects into a shared world. This reframes the entire Egyptian obsession with solar theology: the sun is not important because it provides light and warmth, but because it provides the *ontological condition for relation*.

6.5 Shu and Tefnut: Reality and Perception

CT Spell 80 and the Bremner-Rhind account agree: Shu maps to substantive reality (“thing,” “really”) and Tefnut neighbors *Sj* (divine perception). The first pair is not air-and-moisture but *what-is-real* and *what-perceives*. Their product, across texts, is Maat—the principle of definite order. This yields a geometric creation sequence:

1. Undifferentiated awareness in Nun (pure consciousness, pure reference)
2. Self-differentiation into reality (Shu) and perception (Tefnut)
3. The automatic emergence of order (Maat) from their conjunction
4. The specification of multiplicity through the eye’s act of seeing-into-being

This sequence is not chronological—CT 335 already warned us that the First Occasion is a connective, not a temporal marker. It is structural: these are the relations that constitute a world.

6.6 Four Texts, One Geometry

The most significant finding is the consistency. Across 1,700 years:

- *hpr* always maps to structural grammar, never to narrative action
- *Nun* always maps to demonstratives, never to water
- *jb* always maps to “heart” (1.00), never to “mind”
- *hk* always maps to “something/thing/really,” never to the supernatural
- The two eternities always map to conjunctions, never to durations

The Western scholarly narrative of Egyptian theological development—from primitive polytheism to sophisticated henotheism to proto-monotheism—assumes that the meaning of these concepts changed over time. The embedding space, trained on the full corpus, finds no such evolution. The geometry is stable. What changed was the narrative framing, not the conceptual structure.

7 Discussion

7.1 The Genesis Parallel Reconsidered

The Great Hymn to the Aten has been compared to Genesis 1 and Psalm 104 since Breasted’s *Dawn of Conscience* (1933). The parallels are real: a single creator, creation through speech

and perception, the ordering of day and night, the provision for all creatures. But the geometric analysis reveals that the underlying conceptual structures are profoundly different.

Genesis 1 operates on *creatio ex nihilo* and the word-as-command: “Let there be light.” The Hymn to the Aten operates on becoming and the eye-as-perceiver: the Aten sees things into definite existence. Genesis separates creator from creation; the Egyptian texts describe the creator’s self-differentiation. Genesis organizes creation as a temporal sequence (Day 1, Day 2...); CT 335 explicitly warns that the First Occasion is a connective, not a date.

The surface similarity (one god creates everything) conceals a structural divergence: Genesis creates *from outside*, the Egyptian texts create *from within*. The embedding space makes this measurable: the verbs of creation map to structural relations, not to production or manufacture. The “monotheism” of the Aten is not the monotheism of Genesis.

7.2 The Multiple-Cosmogony Problem Dissolved

If creation is a structure rather than a story, the existence of multiple Egyptian creation accounts is not a problem. The Heliopolitan account (Atum), the Memphite account (Ptah’s heart and tongue), the Hermopolitan account (the Ogdoad), and the Theban account (Amun) are not competing narratives but different projections of the same geometry—like blueprints showing front, side, and top views of the same building.

The embedding space supports this reading. The creation verbs (*hpr*, *qm*, *shpr*) map to the same structural region regardless of which text they appear in. The concepts are stable; only the narrative packaging changes. The Egyptians did not have a “cosmogony problem”; we did, because we assumed cosmogonies must be stories.

7.3 Implications for Egyptian Theology

If the analysis is correct, several standard Egyptological positions require revision:

1. **The “development of monotheism” narrative** assumes that Egyptian theology evolved toward a single creator god. The geometry suggests the creator was always conceived as a self-differentiating totality; the number of named gods is a surface feature, not a structural one.
2. **The “primitive” reading of bodily creation** (sneezing, spitting, masturbation) assumes these are crude physical metaphors. The geometry shows the creation verbs are structural, not physical; the bodily language may encode something the structural analysis of language cannot distinguish from grammar itself.
3. **The separation of religion and philosophy** in Egyptian studies assumes that “real” philosophy begins with the Greeks. The geometry reveals a conceptual system that distinguishes being from becoming, substance from perception, and conjunction from sequence—distinctions that Western philosophy credits to Parmenides, Aristotle, and Kant respectively.
4. **The Aten as precursor to biblical monotheism** misreads qualitative uniqueness (god-good-always-love) as numerical uniqueness (there is only one). The embedding space does not support the reading that Akhenaten denied other gods’ existence; it supports the reading that he asserted the Aten’s qualitative incomparability.
